..!`S.I V. 17.. '.5.i.5.4..!`Â . What do I need to install in order to use this utility? A: Well, the first obvious error is that you're asking a question that you're not even asking :) To be precise, the tool you're asking about is a Linux-based tool. Linux is a free operating system, and it's available for most kinds of the hardware that can run a desktop OS (such as PC, Laptop, and Tablet). In the case of the 8051 CPU, the tool you're referring to is called the Microchip Code Composer. It's an example of the C64 architecture, the last one being released in 1987. You'd have to find an example of the C167 architecture - probably around 2001. However, I think there was a project known as C167 that had a licensed version in 2007. However, I think the license was never published, so I can't give the details of it.

Q: How to set max compression of a file in spark streaming In Streaming context. I would like to set the maximum size of my data for compressing it so that in case if the size of the data exceeds the maximum size of the compressed data I would not need to recompress the data which will increase the overall execution time. Currently the compression I am using is AesGolayCodec. And the data size is greater than 100 MB. A: In recent versions of Spark Streaming, there is a new API available to control the compression level of the data. Compression from

SPARK\_SUBMIT\_COMPRESSED\_RAW\_RECORDS to  
SPARK\_SUBMIT\_COMPRESSED\_RAW\_RECORDS You can do it with

---

following lines of code. `val conf = StreamExecutionConfig( "Testing  
CompressedRecords", Seconds(2)) val cConf = new  
StreamingContext(conf, Seconds(3), Seconds(2)) val reducer = new  
StreamingAggregate(cConf, reducerSchedule(),`
