Illustrator is the industry standard program for vector (shape-based) graphics. It was originally a competitor to Adobe's PostScript RIP. When Adobe moved to PostScript, it was integrated into the Adobe suite. In 2017, Adobe discontinued the stand-alone product but continued to maintain it and support it for those who need it. Adobe Illustrator is a vector image editing program and is not used for raster (pixel-based) work such as creating images for the Web or other raster-based image editing. Illustrator is used for creating vector (shape-based) graphic elements and elements such as art, diagrams, and images. If you decide to use Illustrator, keep these points in mind: **Ensure that you create vector files:** Any image file that is saved as a raster image file can't be edited in Illustrator. You must save the file as a vector image file by choosing the "Save for Web" or "Save for Devices" option at the File menu. **Protecting Illustrator files:** If you're sharing your files on a network, take the precaution of enabling password protection to protect them. **Prepping for web design:** The Web uses a type of graphics called a _hyperlink._ Typically, you create text for the hyperlinks in a text editor first. Then, you import the hyperlink text into Illustrator, and you draw the hyperlink in Illustrator. After you've drawn the hyperlink, you can make sure that it's correct by setting its height and width, moving it, and then resaving the file. The details on how to do this are described in Chapter 5. **Building interactive vector graphics:** Because you can see the vector vectors used in a vector graphic, you can easily change its resolution, change the size of the vectors, and change the number of colors used to create it. You can even build animation into the graphic and have it play to fit the pace of your design. It's a great tool for designing graphics for interactive websites or games. **Creating cover images for books or magazines:** For book and magazine covers, you need to place type in the graphic. By creating your graphic in Illustrator, you can place the type right inside the graphic.

It reads: "We were unable to bring Hundred to fruition for a number of reasons. We were pleased with the album which was very well received and is still very popular. But we decided it was a mistake for us to keep going in that direction. It wasn't the music. "In the years since, we've been very pleased to continue to work with Thrill Jockey and release more Hundred records. And we remain excited about the album we are currently working on. But we knew that when we were making the decision, we were giving up on a future that we'd loved for many years. So we decided to stop before we knew what was going to come. "We don't want to discourage anyone from following Hundred's wonderful journey. We have lots more music that has not yet been heard and we are looking forward to sharing it with our friends. We have a deeply appreciative and loyal fanbase. We remain excited about Hundred's future and willing to continue working on new music. We continue to believe that Hundred has a bright future."Q: Remove files that do not contain a specific string I want to remove files that do not contain a specific string in their name. Two Cheers for John Oliver and IFC's Adultswim John Oliver knows that successful stand-up comedy is all about timing, content and commitment. The host of Comedy Central's "The Daily Show" admits that his boyish face and 19-year-old butt would suggest that he's not the type to put up with any bullshit. To hear him tell it, the cutthroat culture of Hollywood is not for him. In a recent telephone conversation, Oliver discussed his new stand-up comedy special, "John Oliver's New York," on which he rolls up on audiences of New York's comedy clubs and other venues with his irreverent, hilarious tales of the neuroses and hypocrisies of the people in the media. His address to critics, however, took on an additional nuance when he admitted that he'd feel unfulfilled if he went into a vacuum and stopped making jokes, anyway. "I have to get sick of myself," he stated. "I have to wear out my welcome. Once people get comfortable with you doing comedy, there's a sense of: You're not going to see anymore. I think that's a shame." Oliver, a graduate of Dartmouth College and the University of Oxford, has a lot to say about the media's role in society, rants on about the "two-faced" career of a would-be comedian, and shows affection for his rock-and-roll hero John Lennon. Read more about his opinions on the media here. Oliver is just one of the latest comedians to crack the lucrative Hollywood ranks. Patrick Marleau and Mike Dunn of "The Movies That Made Us" will recount the making of their current comedy film, "Man Prank." The comedy special is produced by the newly formed IFC Entertainment, which was recently founded by former head of NBC Entertainment and Media Robert Greenblatt and Marc J. Platt, respectively. The company announced Tuesday that Oliver and stand-up comic Russell Brand will host its first original comedy series, "Adultswim." The half-hour is scheduled to premiere in the summer. Oliver debuted Tuesday on Comedy Central's "The Daily Show," which he co-hosts with Jon Stewart. Oliver was tapped by Stewart to succeed Craig Kilborn, who left the show earlier this year. Oliver delivered his debut segment by denouncing the "hateful" and "self-righteous" response to the recent shooting at the University of California
